

# SUSTAINABILITY

Supertech's sustainable practices have reduced approximately **2,500,000 kg of CO2 emissions** by 2022. Some of those measures were:

## Sustainable Process:

- It uses recycled materials to reduce raw material demand and conserve natural resources.
- It practices effective waste management and zero effluent discharge to ensure environmental responsibility in its manufacturing methods.

## Sustainable Energy:

- It adopted use of energy-efficient lighting and heating systems and recycling programs.
- It completely eliminated the use of Coal and switched towards Greener fuel.

## Sustainable Product:

- The laminates produced have low levels of VOCs and other pollutants, minimizing the risk of indoor air pollution.
- Their durability reduces the need for frequent replacements, contributing to the sustainability of building materials.

## Green Initiatives:

- It collaborates with local urban bodies and social clubs to plant trees and preserve natural resources

Supertech aims to become carbon neutral by 2044
